Want to build customer relationships and improve order processing without spending thousands of dollars?

Yep there's an app for that!

iPhone and **Android** apps from inetCRIB.com enable sales and route personnel, and even your customers, to create, review/edit, and place orders. Place your barcode labels wherever your items are stored to ensure you are the supplier-of-record. Then use the optional mini barcode scanner to do it quickly and error free.

- helps eliminate ordering mistakes and product returns that may damage your relationship and cost you money
- faster customer service - customers aren't waiting on the phone to talk to someone in sales
- email the customer the order list for approval or PO# right from the smartphone
- reduce stockouts that cause rush orders and expensive shipping costs
- Orders can be sent directly into your business system instantly ready to fill and deliver, or as an emailed spreadsheet.

inetCRIB.com is not a supplier consortium organization or broker so there are no initiation fees, annual fees, or charges per line item - just a commitment-free fixed monthly subscription starting as low as **$15.**

For information how inetCRIB.com improves your order processing and can manage consigned and customer inventory, visit our web site, call, or send an email to sales@syconsystems.com.

InetCRIB.com is an Internet web site for inventory and supply chain management with varying business models from simple on-demand ordering to full inventory management for suppliers and businesses
